## MSI-4260 Port-A-Weigh / MSI-6260 Trans-Weigh Retrofit Opportunity

Upgrade your existing MSI-4260 Port-A-Weigh or MSI-6260 Trans-Weigh Crane Scales to the Industry's premier wireless network solution for overhead weighing applications with the MSI-6260CS Retrofit Kit. You will benefit from the enhanced application flexibility and improved reliability of CellScale technology in addition to a significant cost savings! The MSI-6260CS Retrofit Kit allows you to take advantage of your previous investment in MSI equipment and upgrade for a fraction the cost of purchasing new. Larger scale capacities net even greater cost savings!

The retrofit kit includes a new front casting/electronics section that integrates CellScale technology with either model to convert them to MSI-6260CS Trans-Weigh RF units; providing an advanced wireless data-gathering

network that is ideally suited for process control, safety monitoring and weight related data collection. If your MSI-4260 or MSI-6260 is in need of service, now is an excellent time for you to consider upgrading it.

After conversion, the new MSI-6260CS easily adapts into any CellScale wireless network. Wireless transmission of real time weight and product information can be easily networked and communicated to all CellScale accessory products; including MSI Digital Indicators (MSI-9850, MSI-9750A and MSI-3750CS) and the MSI-9020 CellModem (for Scoreboard, Printer, PLC and PC interface). CellScale Virtual Monitor (CVM) software is available to enable your PC to act as a full-featured digital scale indicator with data logging capabilities.

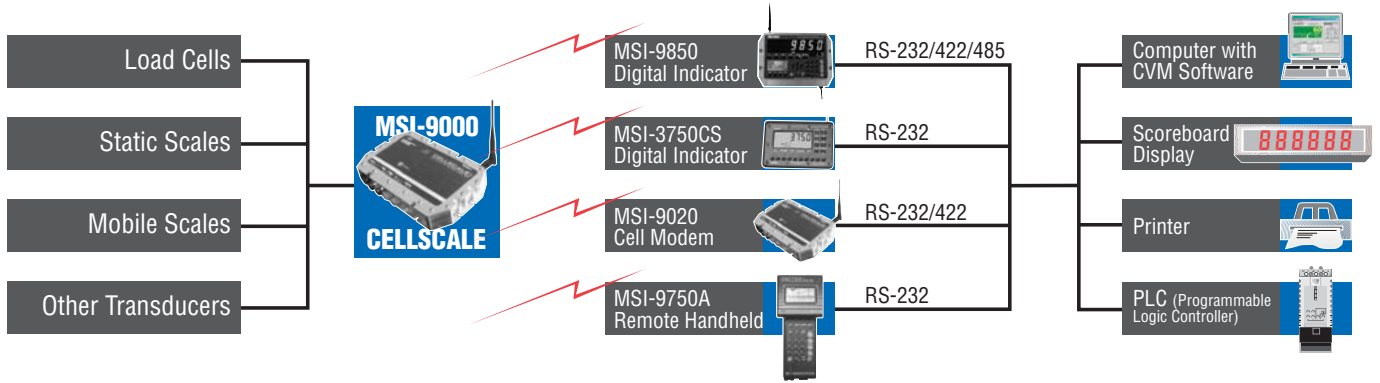

### Network Component Options

MSI features Industry's most versatile, portable and handheld RF Digital Indicators for CellScale Network Weighing Solutions. Each provides CellScale's rich feature set to any crane scale application and allow users to monitor and control up to 32 independent crane scales from single or multiple locations. In addition, the MSI-9850 and MSI-9750A both support multi scale display on individual networks (up to 8 simultaneously), data logging, bar code scanner interface and inter-network radio messaging.

The MSI-9020 CellModem provides a wireless CellScale link with peripheral serial devices including scoreboards, printers, programmable logic controllers and personal computers. CellScale Virtual Monitor (CVM) software is available to enable your personal computer to act as a full-featured digital scale indicator with data logging and information publishing features.

## BASIC CELLSCALE® NETWORK

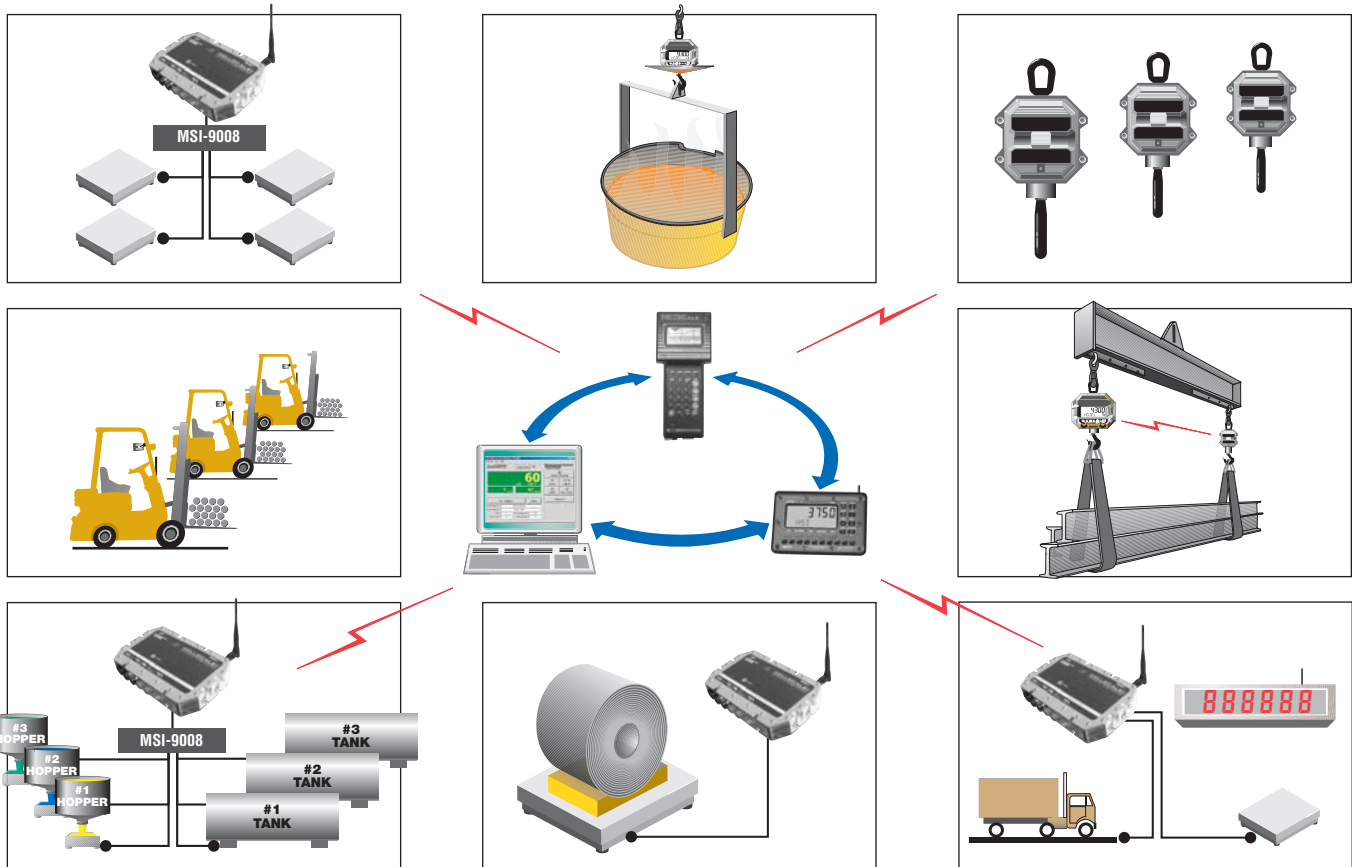

CellScale Network Solutions provide an efficient means to monitor and control multiple sensor inputs and outputs simultaneously with real time communications to plant information systems via a secure wireless network. The radio functions license free in the USA / Europe allowing multiple networks of separate scales and peripheral

devices to your host computer. To learn more about the benefits of CellScale Network Solutions and the retrofit opportunities within your operation, contact our Sales Department at: 800-874-4320 (USA and Canada) or 206-433-0199.

## MULTIPLE CELLSCALE® NETWORKS

*Up to 64 CellScale Networks can be monitored and controlled from a single location*
